Status	Completed

Revamping the Product Website to Drive Engagement and Conversion

🧩 Background & Problem Statement

Aulas, an education technology platform, offers a suite of tools for school management and digital learning. Despite having a robust product, their **existing marketing website was underperforming**:

- Users dropped off before discovering the product's key value propositions
- Messaging was vague and feature-heavy
- Visual identity didn’t reflect the platform’s modern, tech-forward brand
- Lack of guided interaction for users unfamiliar with the ed-tech space

Business Impact: Low engagement metrics and missed conversion opportunities for demo requests and app downloads.

🎯 The Objective

To **redesign the Aulas product website** into a modern, intuitive experience that reflects the brand’s bold identity and clearly demonstrates product capabilities, resulting in increased **engagement** and **conversions**.

We aimed to:

- Tell a compelling product story
- Highlight benefits over features
- Guide users toward meaningful actions (signup, demo, app download)
- Stay true to Aulas’ brand tone and visual language

🛠️ My Role & Contributions

- **UX/UI Designer and Strategic Collaborator**
- Led collaborative workshops with **sales and marketing teams** to align goals
- Designed a **chatbot section** for user guidance and lead generation
- Delivered fully responsive, brand-consistent visual mockups

- Oversaw testing and implementation feedback loop with developers

---

🔍 Design Process

1. Team Alignment & Research

I partnered with **sales and marketing stakeholders** to surface key user objections, goals, and engagement drop-off points. These conversations highlighted:

- A lack of clarity around what Aulas actually does
- Visitors dropping off before reaching the CTA
- A need for **human connection** through guidance or interaction

> 🧠 Insight: “Users aren’t sure what the product does until they scroll halfway down — we’re missing the moment of first impression.”

2. Information Architecture & Narrative Flow

We restructured the site to follow a **clear narrative arc**:

- Who we are → What we solve → How it works → Real results → Let’s talk
- Added a **persistent CTA** and signposting for demos, downloads, and chatbot
- Simplified the messaging: **Value-first** over feature-dump

3. Visual Design & Brand Integration

We embraced Aulas' **bold purple palette**, circular graphic motifs, and sharp typography to create a **visual identity that felt both innovative and trustworthy**.

Covid pandemic shows online learning is here for good: the mental barriers must go
Bidyesh Singh

Key choices included:

- **Product-first layout** with clean sections that showed the platform in action
- **Vector illustrations and iconography** that matched the ed-tech theme
- Clear content blocks for **user management, classroom insights, and operational efficiency**

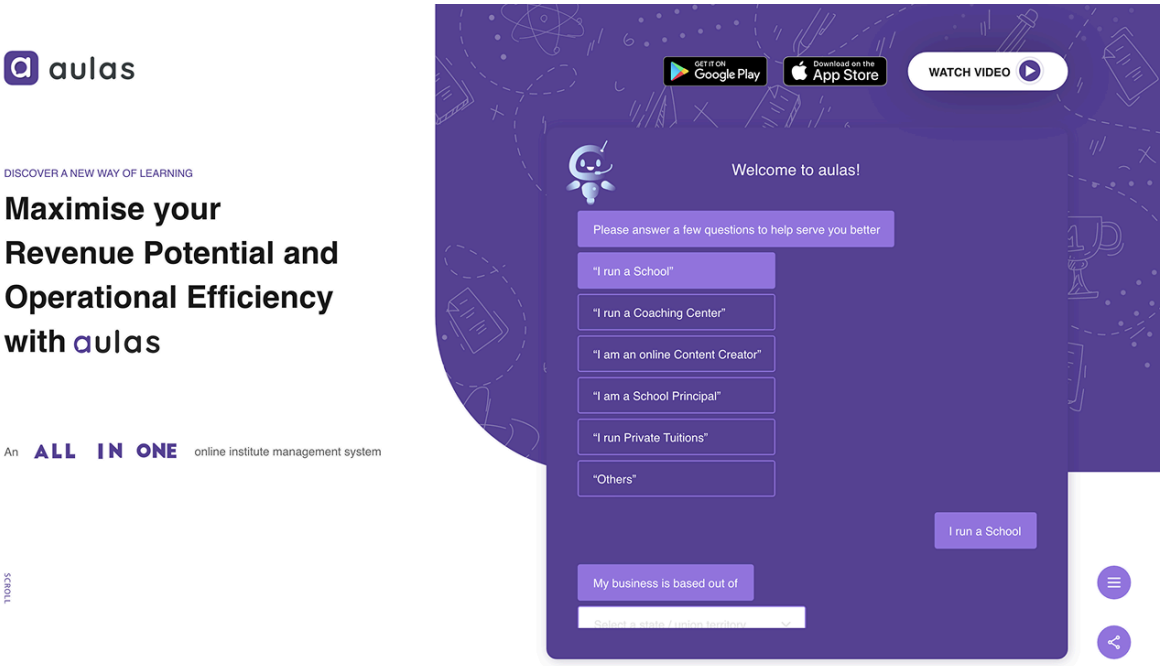

> ✍️ Personal Insight: I worked closely with the design lead to maintain consistency with Aulas' existing product UI, ensuring users felt the connection from website to app.

4. Feature Addition: Chatbot Section

One of the most impactful changes was the **integration of a chatbot**, designed to:

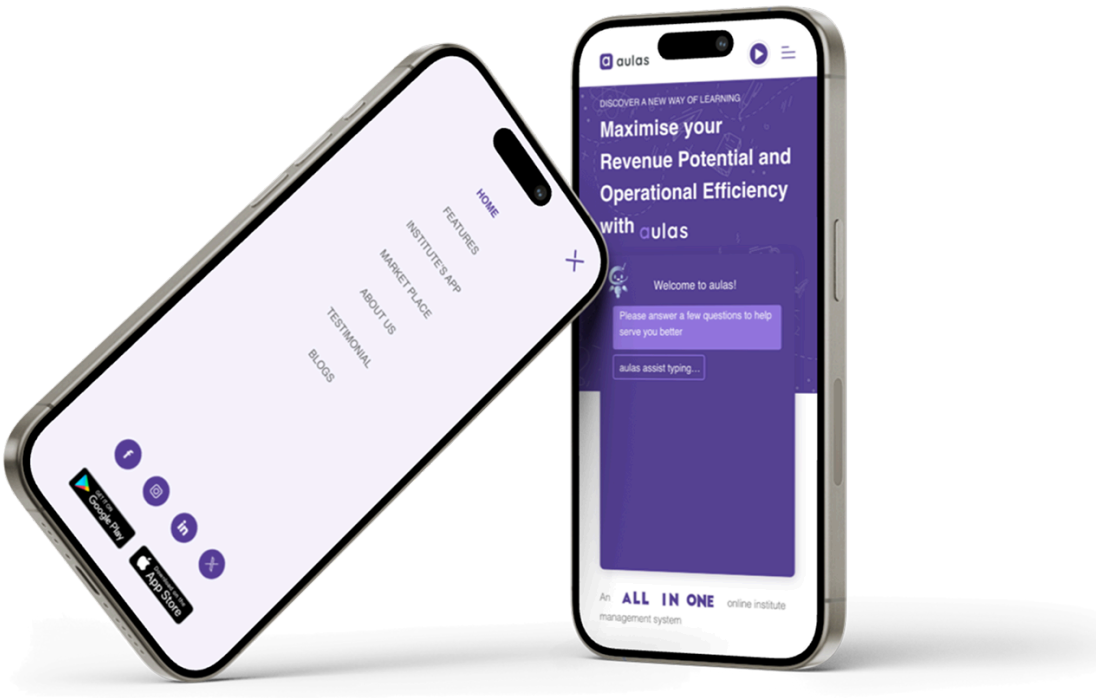

- Answer top-level product questions instantly
- Nurture leads toward demo sign-ups
- Provide human-like touchpoints without navigating away

We kept it subtle, friendly, and brand-aligned — tested multiple tone-of-voice options to strike the right balance between professional and helpful.

✅ Outcome & Impact

- 📈 **30% increase in engagement** through clearer navigation and visual hierarchy
- 🔁 **20% boost in conversion rates**, attributed to better onboarding flows and chatbot interaction
- 🎯 Sales team reported improved lead quality due to better-informed inquiries

✨ Reflections

This project reminded me that **great web design isn't just about aesthetics — it's about clarity, confidence, and connection**. By aligning cross-functional teams early and keeping user perspective central, we were able to design a website that not only looked great, but performed meaningfully.

Design that reflects the product's promise builds trust — fast.
